## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

- 1. 64. (Canceled)
- 65. (Previously Presented) A method of broadcasting, comprising:

providing a service ID from an issuer to identify a broadcast service wherein the service ID uniquely identifies a broadcast service among one or more broadcast services from a common content server on a common radio channel, and further identifies availability of the broadcast service in an adjacent sector, wherein the broadcast service has a service name, wherein the service ID is a globally unique service ID issued by a global issuer, wherein the service ID comprises a BCMDS\_ID, and wherein an IP multicast address and UDP port number are associated with the BCMCS ID;

sending the service ID from the content server to a base station, wherein the content server is not an adjacent sector base station;

configuring a broadcast service parameters message at the base station that includes the service ID;

transmitting the broadcast service parameters message to a mobile station; and using the service ID in the broadcast service parameters message at the mobile station to determine the availability of the broadcast service in the adjacent sector.

- 66. (Canceled)
- 67. (Canceled)
- 68. (Previously Presented) The method as in claim 65, further comprising requesting by the content server the service ID from a global issuer.
  - 69. (Canceled)

- 70. (Canceled).
- 71. (Canceled).
- 72. (Previously Presented) The method as in claim 65, further comprising dynamically generating a BCMCS\_ID and associating a lifetime value with the BCMCS\_ID.
- 73. (Previously Presented) The method as in claim 74, further comprising requesting by the content server the service ID from the local issuer.
  - 74. (Currently Amended) A method of broadcasting, comprising:

providing a service ID from an issuer to identify a broadcast service, wherein the broadcast service has a service name, wherein the service ID uniquely identifies a broadcast service among one or more broadcast services from a common content server on a common radio channel, and further identifies availability of the broadcast service in an adjacent sector, wherein the service ID is a locally unique service ID issued by a local issuer and comprises a BCMDS\_ID, wherein the an IP multicast address and UDP port number are associated with the BCMCS ID;

sending the service ID from the content server to a base station, wherein the content server is not an adjacent sector base station;

configuring a broadcast service parameters message at the base station that includes the service ID;

transmitting the broadcast service parameters message to a mobile station; and using the service ID in the broadcast service parameters message at the mobile station to determine the availability of the broadcast service in the adjacent sector.

- 75. (Canceled)
- 76. (Canceled).
- 77. (Previously Presented) The method as in claim 74, further comprising

dynamically generating a BCMCS\_ID and associating a lifetime value with the BCMCS\_ID.

- 78. (Canceled).
- 79. (Previously Presented) The method as in claim 65, wherein the BCMCS\_ID is a dual BCMCS\_ID comprising a global indicator to indicate uniqueness of the BCMCS\_ID.
- 80. (Previously Presented) A method of broadcasting from a base station, comprising: receiving from an issuer via at least one content server a first broadcast service identified by a first service ID, wherein the first service ID uniquely identifies a broadcast service among one or more broadcast services from a at least one content server on a common radio channel;

receiving via at least one content server from the issuer a second service ID that identifies a second broadcast service received by a neighboring base station sector, wherein the second service ID uniquely identifies a broadcast service among one or more broadcast services from a at least one content server on a common radio channel, wherein the first service ID comprises a first BCMCS\_ID and wherein the second service ID comprises a second BCMCS\_ID, and wherein an IP multicast address and UDP port number are associated with the first BCMCS\_ID;

configuring neighbor configuration data that relates to the second broadcast service;

configuring a broadcast service parameters message that includes the second service ID and the neighbor configuration data; and

transmitting the broadcast service parameters message to a mobile station currently receiving the first broadcast service.

- 81. (Canceled)
- 82. (Previously Presented) The method as in claim 80, wherein the first service ID was provided by a global issuer.
- 83. (Previously Presented) The method as in claim 80, wherein the first service ID is a globally unique service ID issued by a global issuer.

- 84. (Canceled)
- 85. (Canceled)
- 86. (Previously Presented) The method as in claim 80, wherein the first service ID has an associated lifetime value.
- 87. (Previously Presented) A method of broadcasting from a base station, comprising: receiving from an issuer via at least one content server a first broadcast service identified by a first service ID, wherein the first service ID uniquely identifies a broadcast service among one or more broadcast services from a at least one content server on a common radio channel, wherein the first service ID is a locally unique service ID issued by a local issuer, wherein the first service ID comprises a first BCMCS\_ID, and wherein an IP multicast address and UDP port number are associated with the first BCMCS\_ID;

configuring neighbor configuration data that relates to the second broadcast service;

configuring a broadcast service parameters message that includes the second service ID and the neighbor configuration data; and

transmitting the broadcast service parameters message to a mobile station currently receiving the first broadcast service.

- 88. (Canceled)
- 89. (Canceled)
- 90. (Canceled)
- 91. (Previously Presented) The method as in claim 80, wherein the first BCMCS\_ID is a dual BCMCS\_ID comprising a global indicator to indicate uniqueness of the first BCMCS ID.
  - 92. (Currently Amended) A method of receiving a broadcast at a mobile station,

comprising:

receiving a first broadcast service identified by a first service ID from a first base station sector, wherein the first service ID is a globally unique service ID issued by a global issuer, and wherein the first service ID uniquely identifies a broadcast service among one or more broadcast services from a content server on a common radio channel;

receiving a broadcast service parameters message that includes a second service ID, wherein the second service ID uniquely identifies a broadcast service among one or more broadcast services from a content server on a common radio channel, and neighbor configuration data, wherein the second service ID identifies a second broadcast service available from a second base station sector, the first and second service IDs being received via a content server from a common issuer, wherein the first service ID comprises a first BCMCS\_ID and wherein the second service ID comprises a second BCMCS\_ID, and wherein an IP multicast address and UDP port number are associated with the first BCMCS\_ID;

examining the neighbor configuration data that relates to the second broadcast service; and

determining, based on the neighbor configuration data, whether the first service ID and the second service ID identify the same broadcast content whereby reception of the broadcast content is continued in the second base station sector.

- 93. (Canceled)
- 94. (Previously Presented) The method as in claim 92, wherein the first service ID was provided by a global issuer.
  - 95. (Canceled)
  - 96. (Canceled)
  - 97. (Canceled)
  - 98. (Previously Presented) The method as in claim 92, wherein the first BCMCS\_ID

has an associated lifetime value.

99. (Previously Presented) The method as in claim 92, wherein the first service ID is a locally unique service ID issued by a local issuer.

100. (Canceled)

101. (Previously Presented) The method as in claim 92, wherein the first BCMCS\_ID is a dual BCMCS\_ID comprising a global indicator to indicate uniqueness of the first BCMCS\_ID.

102. (Canceled)

- 103. (Previously Presented) The method as in claim 65, wherein the content server sends the service ID to the base station via a Packet Data Serving Node.
- 104. (Previously Presented) The method as in claim 65, wherein the content server comprises a web server configured to serve video and audio to one or more users via user browsers.
- 105. (Previously Presented) The method as in claim 65, the method further comprising transmitting a service name to the base station, wherein the service name includes alphabetic characters and is configured to be read and interpreted by an end user.
- 106. (Previously Presented) The method as in claim 65, the method further comprising transmitting video content as a broadcast service to the base station.
- 107. (Previously Presented) The method as in claim 106, wherein the video content is transmitted using IP packets.

- 108. (Previously Presented) The method as in claim 65, the method further comprising providing multicast services from the content server on the same radio channel to the base station.
- 109. (Previously Presented) The method as in claim 80, the method further comprising receiving at the base station at least one service ID via a Packet Data Serving Node.
- 110. (Previously Presented) The method as in claim 80, the method further comprising receiving at the base station video content from at least one content server.
- 111. (Previously Presented) The method as in claim 80, the method further comprising identifying at the base station at least a first multicast service broadcast to the base station by different content servers.
- 112. (Previously Presented) The method as in claim 92, the method further comprising receiving at the mobile station from the first base station:
- a service name, wherein the service name includes alphabetic characters and is configured to be read and interpreted by an end user; and

video content associated with the service name.
